Empowering AI innovation through decentralized funding.

✓ What Makes Us Different

- **Real Utility:** Funds real AI initiatives—not just hype.
- **Fixed Supply:** 10,000,000 QTX tokens. No minting. Ever.
- **Accessible Entry:** Initial liquidity started at \$250. We build from the ground up, transparently.
- **AI-Native:** We're not adding AI for buzz—we exist to fund it.

Investment Details

Token Basics

Token Name: Quantrex

Ticker: \$QTX

Blockchain: Binance Smart Chain (BSC)

Total Supply: 10,000,000 QTX

Minting: Disabled – fixed supply forever

Launch Info

Launch Price: \$0.20 per QTX

Initial Liquidity: \$250

Liquidity Platform: PancakeSwap

Ownership Renounced: Yes

Liquidity Locked: Yes

Tech & Utility

Quantrex is **harnessing** the power of **cutting-edge blockchain technology** on the Binance Smart Chain (BSC) to build a transparent and decentralized platform aimed at funding AI projects. This strong framework guarantees secure, fast, and cost-effective transactions, making it ideal for small-scale AI initiatives that require flexible funding options.

At the heart of the Quantrex ecosystem is the **QTX token**, which serves as the primary unit of value. **With a capped supply of 10,000,000 tokens and no minting or inflation**, scarcity and value are preserved. Token holders play an active role in governance, including decisions on which AI projects receive funding—fostering a truly **community-driven** model.

Our tokenomics framework ensures that every **\$QTX directly contributes to AI innovation**. From providing initial liquidity to supporting long-term project funding, Quantrex creates a sustainable financial environment for developers, entrepreneurs, and the broader AI community.

Problem + Solution

We want to make a positive **impact** on the world of AI

✗ The Problem

Despite the hype around AI and crypto, early-stage AI developers face two major challenges:

- **Lack of accessible funding** – Most funding flows to large corporations or VC-backed startups.
- **No community involvement** – Traditional funding models lack transparency and exclude public input.

✓ The Solution

Quantrex uses crypto to fund real-world AI projects through a transparent, community-driven model.

- Decentralized Access – **\$QTX holders vote on which AI projects receive funding.**
- Fixed, Transparent Supply – **10M tokens. No inflation.** Fully on-chain.
- Real Impact – We support practical AI tools solving real-world problems.
- Community Control – Open governance: innovation is guided by the people.

What We Fund

Quantrex supports early-stage, high-potential AI tools and startups—especially those overlooked by traditional VC funding. From automation scripts to micro SaaS platforms, our focus is on practical innovation.

Project Criteria

Every project we consider is evaluated based on:

- **Usefulness** – Does it solve a real problem?
- **Feasibility** – Is it buildable and testable with **minimal resources**?
- **Scalability** – Can it grow with **community support**?
- **Transparency** – Are the developers open-source, doxxed, or publicly trackable?

Example Use Cases

- An **AI-powered** research assistant for startups
- A **lightweight ML model** for inventory prediction
- A **decentralized chatbot** trained on open data
- An automation tool that simplifies **smart contract auditing**

Impact Metrics

We track funded projects with transparent KPIs, including:

- **Deployment status**
- **User engagement**
- **ROI (crypto-based and utility-based)**
- **Community feedback**

Vision & Expansion

Our Growth Philosophy

Quantrex **doesn't follow a fixed roadmap**. Innovation moves fast—and we move with it. We operate with an adaptive growth model, guided by real use cases, community feedback, and opportunity—not arbitrary dates.

Agile Development

We **fund** and **build** as needed, focusing on utility and results. There are no empty milestones—only measurable impact.

What's Ahead (Without Deadlines)

Continuous funding of small, high-potential AI projects
Transparent dashboards to track project progress
Listing on **CoinMarketCap** and **CoinGecko** as we scale—these come naturally with real traction
